

CertifyPro

Create, Issue & Verify Certificates at Scale

Trusted by 500+ organizations • 50,000+ certificates issued • 99.9% uptime

The Problem

Time-Consuming

Manual certificate creation takes hours per batch

No Verification

Recipients can't verify authenticity of certificates

Inconsistent Design

Templates vary, brand identity is lost

No Tracking

Organizations can't track issued certificates

The Solution: CertifyPro

An end-to-end platform for certificate creation, issuance, and verification — with QR codes, custom branding, and bulk generation.

Drag & Drop Builder

Visual template editor with draggable logos, signatures, and seals

Bulk Generation

Upload CSV, generate hundreds of certificates in minutes

QR Verification

Every certificate gets a unique QR code for instant verification

White-Label Pages

Verification pages show your org's branding, not ours

Field Control

Choose exactly which data fields appear after QR scan

Secure & Trackable

Track verifications, revoke certificates, manage batches

How It Works

01

02

03

04

Upload Template

Upload your certificate background, logo, and signature image

Map Fields

Drag and position where name, date, ID, and other fields appear

Import Data

Upload a CSV with recipient details — names, emails, roll numbers, etc.

Generate & Share

Generate PDFs with unique QR codes. Download as ZIP or send via email

Visual Template Builder

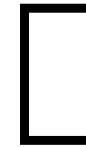

A powerful drag-and-drop editor for designing certificate templates

- ✓ Upload custom background images (PNG, JPG, PDF)
- ✓ Drag & position logo, signature, and seal anywhere
- ✓ Add text fields: recipient name, date, serial number, custom fields
- ✓ Customize font family, size, color, and alignment per field
- ✓ Set QR code position and size on the certificate
- ✓ Live preview as you design

QR Code Verification

Every certificate gets a unique, tamper-proof QR code

1. Each certificate is assigned a unique verification token
2. A QR code is generated encoding the verification URL
3. Scanning opens a branded verification page
4. Only admin-selected fields are displayed (name, date, etc.)
5. Organization logo and name appear — not CertifyPro
6. Verification is logged for audit tracking

Scan to Verify

Certificate #CP-2026-0042

Recipient: John Doe

Status: ☐ Valid

White-Label Verification

Your brand, your verification page — not ours

Before

🛡️ CertifyPro
Generic verification page
No organization branding
Shows all data fields

After

🏢 Your Organization
Your logo & brand colors
Only selected fields visible
Professional, premium feel

Bulk Certificate Generation

CSV Upload

Import recipient data from any spreadsheet — names, emails, roll numbers, custom fields

Batch Processing

Generate hundreds of unique certificates in one click with progress tracking

Custom Issue Date

Pick the exact date to appear on certificates — not just today's date

ZIP Download

Download all certificates as a single ZIP file with loading indicator

Re-download

Access and re-download any previous batch from your dashboard anytime

Batch Management

Search, filter, and delete batches with confirmation protection

Security & Reliability

Row-Level Security

Every database table protected with granular access policies

Tamper-Proof QR

Unique verification tokens that can't be guessed or forged

Audit Trail

Every QR scan logged with timestamp, IP, and user agent

Static Fallback

Verification works even if backend is temporarily down via GitHub fallback

Revocation

Revoke any certificate instantly — status updates in real-time

Role-Based Access

Organization admins and members with appropriate permissions
